

Faithful Families Virtual Walking Challenge

This week we challenge you to step up the intensity or duration of your daily walk. Brisk walking is an excellent aerobic workout that reduces the risk of high blood pressure, high cholesterol, and diabetes.¹

NEWSLETTER WEEK 3

"If I could not walk far and fast, I think I should just explode and perish."

– Charles Dickens

Stay hydrated

Replacing water in the body lost during exercise will help you avoid dehydration. Water is the best drink before and after your walk. Drink at least 2 cups of water before an activity and 2-3 cups of water after you are finished with the activity.³

Visit [CDC.gov](https://www.cdc.gov) for guidelines on how to stay safe and healthy while walking in public spaces.

Move More Break

In this time of physical distancing, use your walking breaks as a way to keep in touch with friends, family, or members of your faith community. Talk on your phone while you walk. Walk together using safe social distancing guidelines. Walk with your family. Find ways to stay connected!

STEP IT UP

Think about your walking pace over the last two weeks and look at the descriptions below. Is your pace a stroll, a brisk walk, or a power walk?

STROLL

This is a casual slow walking pace when you barely exert yourself. At this pace, you can breathe without effort while holding a conversation.

BRISK WALK

This is a faster pace when you are walking quickly and moderately exerting yourself. At this pace, you can carry on a conversation, but you may start to breathe a little heavier and need to catch your breath throughout the conversation.

POWER WALK

This is a high-intensity pace when you are heavily exerting yourself. At this pace, you may be able to say a couple of words between breaths, but holding a conversation will be very difficult.

Here are some tips for increasing intensity and duration of your daily walk.

- Increase your pace slowly and gradually.
- Begin walking faster, going further, and taking longer walks.
- Park farther from your destination.
- Take the stairs.
- Use a pedometer or phone app to track your steps or calculate miles, and strive to keep achieving new goals.
- Walk most days of the week. If you cannot schedule longer walks, take several shorter walks of at least 10 minutes each during the day.
- To get the most substantial benefits, aim to walk briskly for at least 150 minutes a week.²
